A molecule is defined as the smallest particle that can exist in a free and undecomposed state (i.e., natural gas is composed of molecules of methane, ethane, etc.). White Paper: Fundamentals of Orifice Meter Measurement Flow Measurement is the process of measuring fluid in your plant or industry. You can measure flow through a variety of different devices such as Coriolis, differential pressure, vortex, magnetic, ultrasonic, turbine and positive displacement meters. Flow Measurement | Emerson US In the Venturi Tube the fluid flowrate is measured by reducing the cross sectional flow area in the flow path, generating a pressure difference. After the constricted area, the fluid is passes through a pressure recovery exit section, where up to 80% of the differential pressure generated at the constricted area,... Flow rate measurements in hydropower plants using the ... A coriolis flow meter is basically a mass flow meter for measuring the amount or quantity or the mass of fluid, rather than volume, flowing through a closed pipe or tube. Using the Coriolis Effect, that causes a laterally vibrating tube to distort, a direct measurement of mass flow can be obtained in a coriolis flow meter.
